

KEY INFORMATION DOCUMENT (“KID”)

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Alert

You are about to purchase a product that is not simple and may be difficult to understand.

Product

Product:	Gresham House Forest Fund I LP (the LP)
ISIN:	N/A
Website:	www.greshamhouse.com
Manufacturer:	Gresham House Asset Management Limited is the Manager of the LP. Gresham House Asset Management Limited is a wholly owned subsidiary of Gresham House plc (GH), 80 Cheapside, London, EC2V 6EE
Competent Authority:	Financial Conduct Authority
Date of production of KID:	28 April 2023

What is this product?

Type

The LP, established in 2008, is a Scottish Limited Partnership based in the United Kingdom, and is managed by Gresham House Asset Management Limited.

Fund Focus

- Established trading vehicle with proven management
- Planned annual tax-free distributions based on £62.60 per Limited Partnership Share in November 2022, adjusted annually by the 12 month CPI + 1% each year
- Long-term tax free capital growth
- Target total return of 7% with low volatility
- 100% relief of Inheritance Tax (once held for two years)
- Low correlation to equity and bond markets
- Defined exit strategy
- Sustainable management

The Manager conducts technical and legal due diligence on all potential acquisitions using specialist advisors. This product is a long term hold with no recognised market for the shares.

The LP’s investment policy is governed by the Limited Partnership Agreement. Investments are in real assets, so these investments are long term in nature. The first termination date of the LP is 30 November 2033.

Intended investor

The LP is for investors who meet the requirement of the Certified High Net Worth Investor, Certified Sophisticated Investor or Self-Certified Sophisticated Investor exemptions set out in COBS 4.12.4.R. You may wish to consult an Independent Financial Adviser prior to investing in the LP.

KEY INFORMATION DOCUMENT (“KID”)

What are the risks and what could I get in return?

Risk Indicator

The risk indicator assumes you keep the Product for 6.6 years. The actual risk can vary significantly if you redeem at an early stage and you may get back less. You may not be able to cash in early. You may have to pay significant extra costs to cash in early.

The summary risk indicator is a guide to the level of risk of the Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the market or because we are not able to pay you. We have classified this Product as a 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact our capacity to pay you. This Product does not include any protection from future market performance so you could lose some or all of your investment. If we are not able to pay what is owed, you could lose your entire investment.

Performance Information

The main factors that will affect the performance of the LP will be the market prices and demand for UK timber; the ability of the Manager to:- locate, select and realise appropriate acquisition opportunities; diversify acquisitions by both commercial crop and UK geography; time and deliver revenue from harvesting and selling timber at appropriate prices, and achieve attractive long-term returns from the acquisition and sale of forestry land.

As set out in the annual report for November 2022, the Fund has delivered an aggregate IRR of 13.8% per annum across all share classes. The LP is generally illiquid, so we have created a liquid performance proxy¹ for comparative market risk and performance statistics. The performance characteristics of this proxy cover the period January 2006 to April 2023. Market risk will vary over the investment period, the proxy's average rolling six-year risk was 19.4% which rose to a maximum rolling one-year volatility of 50.3% during periods of stress in markets. For comparison, over the same period, the FTSE All-Share has had an average rolling six-year volatility of 16.7% which rose to 37.6% during periods of stress, highlighting that the timber market has historically been slightly more volatile than the broader UK equity market.

We have used an ex-ante moderate performance scenario of 1.7% to calculate the Reduction-In-Yield in the “What are the costs?” section below, which is calculated from the proxy.

What could affect my return positively?

Positive performance factors could be a rise in timber prices; increased demand; good selection and timing of crop harvesting; efficient management of the woodland; and good experience in relation to weather, pests, disease and other uninsured events. A weak sterling, particularly against the euro is likely to improve the competitiveness of UK forestry products against imported timber. Since January 2006, a favourable rolling six-year return of the proxy was 23.2% per annum.

What could affect my return negatively?

The main factors that could affect return negatively are; timber prices either falling or not increasing to the extent expected; inability of the manager to secure good terms on a number of timber harvesting contracts; a lack of suitable assets that can be acquired or realised as and when required; and physical damage to the crop from poor experience to weather, pests, disease and other uninsured events. Since January 2006, an unfavourable rolling six-year return of the proxy was 4.2% per annum.

What could happen in severely adverse market conditions?

Severely adverse market conditions occurred in the proxy between July 2007 and March 2009 when the proxy lost 50.7%, before recovering in March 2011. Under severely adverse market conditions, the LP may have similar and

¹ 50% Standard and Poor's Global Timber and Forestry United Kingdom index and 50% Acadian Timber, rebalanced where daily performance data was not available.

KEY INFORMATION DOCUMENT (“KID”)

proportionate losses, and there is a risk that the capital value of an investment in the LP could reduce significantly, potentially down to zero.

What happens if Gresham House plc is unable to pay out?

There is no direct financial exposure for Members of the LP to GH. Members own the underlying assets of the LP and in the event of the failure of GH, Members would appoint another manager to manage the LP.

If Gresham House Forest Fund I LP has no surplus cash, distributions cannot be paid to Members until such time surplus cash is available. Where debt is employed within Gresham House Forest Fund I LP there is no recourse to Members. GH is regulated by the Financial Conduct Authority but Gresham House Forest Fund I LP is not covered by the Financial Services Compensation Scheme being an unregulated collective investment scheme. Members liability is limited to their investment in the LP.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you may receive. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for three different holding periods. They include costs associated with early exit. The figures assume you invest £10,000 although the minimum subscription is £100,000. The figures are estimates and may change in the future.

Costs over time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs and show you the impact that all costs will have on your investment over time.

Investment scenarios £10,000	If you cash in after 1 year	If you cash in after 4 years	If you cash in after 6.6 years
Total costs	£537	£1,054	£1,617
Reduction in Yield (RIY) per year	5.37%	2.48%	2.08%

Composition of costs

The table below shows how each individual cost contributes to the RIY figure in the 'If you cash in' total cost table, assuming that the product is held for the entire RHP. The numbers do not match exactly as the breakdown does not take into account compounding effects..

The table below shows the impact on return per year			
One-off costs	Entry costs	0.54%	The impact of the costs you pay when entering your investment. (This is the most you could pay and could pay less). The impact of costs are already included in the price.
	Exit costs	0.00%	The impact of costs of exiting your investment when it matures.
Ongoing costs	Portfolio transaction costs	0.23%	The impact of the costs of us buying and selling underlying investments for the Product.
	Other ongoing costs	1.32%	The impact of the costs that we take each year for managing your investment.
Incidental costs	Performance fees	0.00%	The impact of the performance fee. We take these from your investment if the Product outperforms its benchmark.
	Carried interests	0.00%	The impact of carried interests.

How long should I hold it and can I take money out early?

Recommended minimum holding period: 6.6 years

KEY INFORMATION DOCUMENT (“KID”)

An investment in Gresham House Forest Fund I LP should be regarded as a longer term investment. The recommended minimum holding period is 6.6 years. The LP has three set Termination Dates whereupon the assets would be sold, and cash distributed, unless Members voted to extend the LP to the next Termination Date. This product can potentially be traded via GH’s established sales procedure and therefore investors may be able to realise their investment at any time subject to this procedure.

How can I complain?
